F14 | GL-only record

TECHGIANT INC. | TREASURY CASH VISIBILITY DASHBOARD

Independent simulated case study | Reporting currency USD | Illustrative FX assumptions | Bank data period: 26-Oct-2026 to 30-Oct-2026

Closing Cash (USD)	Liquidity Headroom (USD)	Bank Transactions	Reconciliation Exceptions
$3,776,601.50	$3,150,851.50	20	3

CASH POSITION BY ACCOUNT (USD)

Account_ID	Currency	Closing_Local	Closing_USD
TG-US-001	USD	1,239,150.00	$1,239,150.00
TG-US-002	USD	850,000.00	$850,000.00
TG-UK-001	GBP	404,550.00	$538,051.50
TG-DE-001	EUR	635,000.00	$736,600.00
TG-IN-001	INR	34,400,000.00	$412,800.00

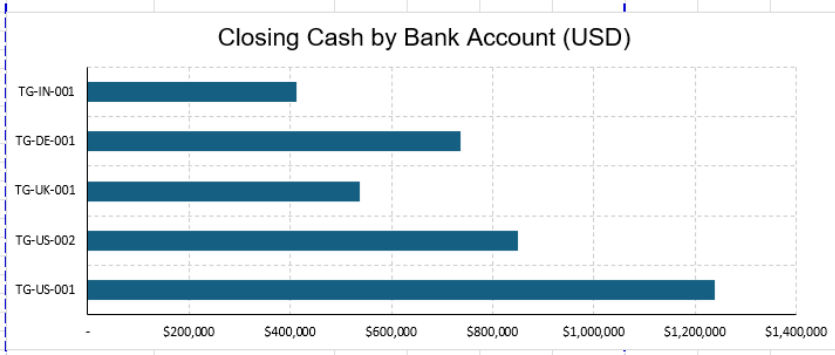

RECONCILIATION STATUS

Status	Count	Note
Matched	17	Duplicate GL ref
Missing in GL	1	GL-only item
Amount mismatch	1	See exception tabs
Duplicate in GL	1	Duplicate reference
GL-only record	1	Investigate separately

INTERPRETATION & NEXT STEPS

The dashboard reports bank-side exceptions separately from GL-only records. The sample includes one missing GL entry, one amount mismatch, one duplicate GL reference and one GL-only record. Closing cash is calculated from opening balances plus bank statement movements; it is not adjusted for unresolved reconciliation exceptions. In a real implementation, treasury, accounting and bank data owners would investigate and resolve these exceptions before relying on

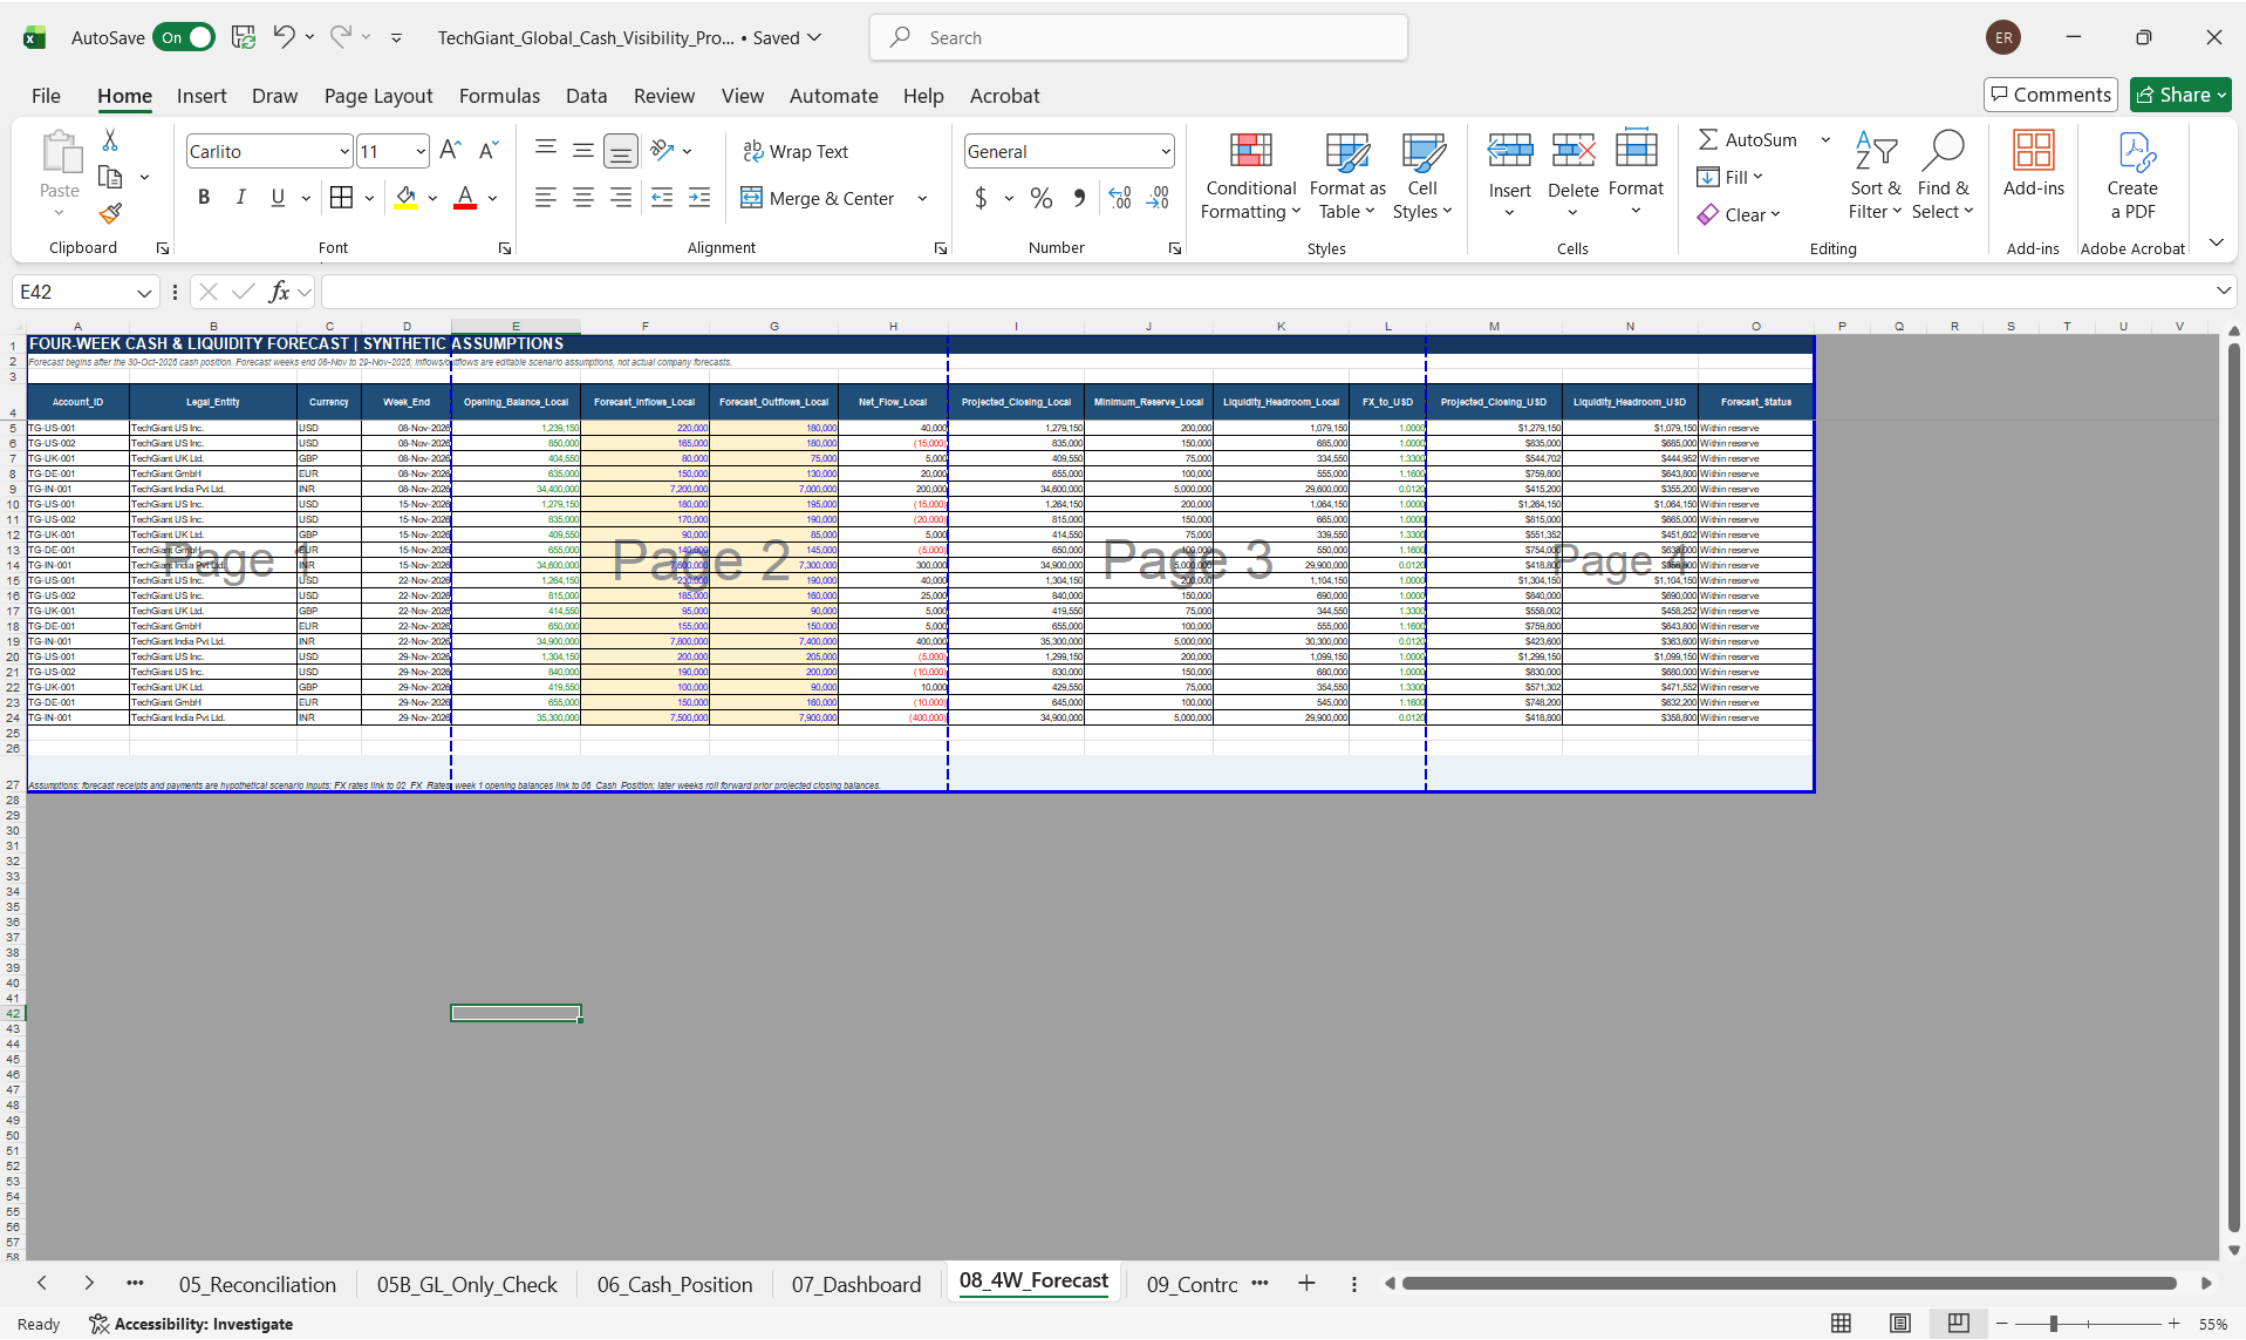

Account_ID	Closing_Cash_USD
TG-US-001	$1,239,150
TG-US-002	$850,000
TG-UK-001	$538,052
TG-DE-001	$736,600
TG-IN-001	$412,800

Notes
Cash balances / positions
Identify API catalogue entries related to account balances or cash positions; record exact API title and version from portal.
Retrieve or exchange bank account balances for cash visibility.
API title, key fields, sample response structure, date/version.
Not yet reviewed
Do not guess endpoint names. Confirm exact resource in your portal.
Bank transactions
Identify transaction or statement-related API resources and sample payloads.
Bring bank movements into a central cash view and support reconciliation.
Reference, account, value date, currency, amount, debit/credit, status fields if available.
Not yet reviewed
Check pagination, date filters and status definitions.
Payment status
Identify payment instruction/status resources and workflow-related documentation.
Monitor payment lifecycle and payment exceptions.
Payment reference, amount, currency, beneficiary reference, status fields if exposed.
Not yet reviewed
Do not send real payment instructions.
ERP integration
Review integration use cases, data models and any documented ERP connector or API patterns.
Understand how ERP and treasury systems exchange financial data.
Field mapping table and a simple source-to-target diagram.
Not yet reviewed
A proposed mapping is not a live integration.
Authentication & security
Read portal documentation for supported authentication, scopes and environment setup.
Understand secure API access and permission boundaries.
Document authentication approach in words only; no secrets.
Not yet reviewed
Never publish access tokens, client secrets or personal credentials.
Testing & error handling
Review sample requests, response codes, errors, limits and changelog notes.
Understand how an implementation team tests and monitors integrations.
Sanitised example request/response or screenshot with all secrets removed.
Not yet reviewed
Only test in an authorised sandbox if one is provided.

Bank Statement Balances

General information | Documentation

Bank Transactions

Back to search results

Description

Bank statement balances are the closing account balances reported by Banks. The application connects Banks, collects bank statements in their native file/API formats, translates them into a unified representation, to present balances in the screens of the application or through this API.

Bank statement quality and continuity checks are performed when collecting bank statements: this API will only present the bank balances that have passed checks.

Use Cases

- Retrieve bank balances by Kyriba account code.
- Retrieve bank balances by external bank statement account identifier.

Change Logs

- **1.3.0 - Released on 2025-Oct-31**
  - Adding tags and other minor fixes.
- **1.2.2 - Released on 2025-Jul-23**
  - Adding missing information about required scope.
- **1.2.1 - Released on 2024-May-09 [Kyriba 24SP5]**
  - The lastKnownBalanceDate is searched within the preceding 31 days
- **1.2.0 - Released on 2022-May-06**
  - New lastKnownBalanceDate response parameter
- **1.1.0 - Released on 2022-Feb-02**
  - Reference endpoint allows to pass uuid or code in the path

Payment Files Status

General information | Documentation

Payment Files Status

Back to search results

Description

Once a routed file is received and processed in Kyriba, this API can be called periodically to check the routed file current status as well as extra information coming from the bank.

Use Cases

- Get the current status of the routed file: receive information on the routed file including Kyriba status and acknowledgement related information
- Get bank acknowledgement detail updates: retrieve details of the bank's answer when, for example, some transfers in the routed file were rejected by the bank (depends on the PSR format used by the bank)

Change Logs

- **1.0.2 - Released on 2025-Jul-23**
  - Adding missing information about required scope.
- **1.0.1 - Released on 2023-Oct-5**
  - Minor description changes
- **1.0.0 - Released on 2022-Oct-7**

Description

Provides the ability to check the current status of an uploaded bulk payment file (routed file)

Transfers

General information | Documentation

Transfers

Back to search results

Description

The API allows retrieving status and deleting transfers.

Deletion

This API can be called to delete the transactions received in Kyriba, which are not yet validated or batched. In conjunction with the Transfers Status it allows to identify multiple transfers that are sharing the same reference or the same file and delete them sequentially.

Status

For transactions received and processed in Kyriba, this API can be called periodically to check their current status as well as extra information such as batching or response coming from the bank.

Use Cases

- Delete a given transfer.
- Track status of all transfers linked with specific file:
  receive information on the current status of all successfully integrated transfers imported in the same file
- Track status of transfer:
  retrieve transfer and its status by Transaction Number or reference

Bank transactions	Data — v1.1.1	Reviewed Data API, Version 1.1.1	Upload batches of transaction or setup data into Kyriba.	POST /v1/data and POST /v1/data/files; fileName query parameter; text payload or multipart file upload; response fields: fileId, fileName, hashSum.	Reviewed – Documentation only	Supports uploading 1–10 files through /v1/data/files. Documented errors: 400, 401, 403, 415 and 500. Transaction-specific file format and processing details not confirmed. No live API execution performed.
Payment status	Payment Files Status — v1.0.2	Reviewed Payment Files Status API, Version 1.0.2	Monitor the processing status of uploaded bulk payment files and retrieve bank acknowledgement information.	GET /v1/payment/payment-files; GET /v1/payment/payment-files/{uuid}/log; filters: fileName, uuid; pagination: page.limit, page.offset; response fields: creationDateTime, fileName, lastACK, nextAction, status, uuid; log	Reviewed – Documentation only	Supports filtering, sorting and pagination. Bank and Kyriba acknowledgement details are available through lastACK. Errors documented: 400, 401, 403, 404 and 500. No live API execution performed.
ERP integration	To be reviewed	Review integration use cases, data models and any documented ERP connector or API patterns.	Understand how ERP and treasury systems exchange financial data.	Field mapping table and a simple source-to-target diagram.	Not yet reviewed	A proposed mapping is not a live integration.
Authentication & security	To be reviewed	Read portal documentation for supported authentication, scopes and environment setup.	Understand secure API access and permission boundaries.	Document authentication approach in words only; no secrets.	Not yet reviewed	Never publish access tokens, client secrets or personal credentials.
Testing & error handling	To be reviewed	Review sample requests, response codes, errors, limits and changelog notes.	Understand how an implementation team tests and monitors integrations.	Sanitised example request/response or screenshot with all secrets removed.	Not yet reviewed	Only test in an authorised sandbox if one is provided.
Bank statement balances	Bank Statement Balances — v1.3.0	Reviewed Bank Statement Balances API, Version 1.3.0	Retrieve closing account balances reported by banks.	Two GET endpoints; parameters: date, type, statementIdentifier/ref; response fields: account, bankBalance, amount, balanceDate, currencyCode, lastKnownBalanceDate.	Reviewed – Documentation only	Supports END_OF_DAY and INTRADAY balance types. Errors documented: 400, 403 and 404. No live API execution performed.
Transfer status and tracking	Transfers — v1.3.0	Retrieve transfer status and delete transfers	Track the processing status of transfers, identify transfers linked to a specific file, and delete transfers that have not yet been validated or batched.	GET transfer status; DELETE a given transfer; search by transaction number or reference; track transfers linked to a file; review batching and bank-response information.	Reviewed – Documentation only	API version 1.3.0, released 15-May-2025. Base URL: /v1/payment/transfers. Supports transfer-status tracking and deletion. Deletion applies to transactions not yet validated or batched. No live API execution performed.

Payment Transaction Summary

General information | Documentation

ERP

Back to search results

Description

Once a bulk payment file is routed or translated, processed in Kyriba, and the Transaction Summary is available, this API can be called to retrieve the detailed list of transactions included in that file. It returns the transaction-level information presented in the Transaction Summary view, so clients can programmatically inspect and validate each payment that was submitted as part of the routed or translated payment file.

Use Cases

- Get transaction-level details for a specific file: retrieve the full list of transactions for a routed or translated bulk payment file (using fileUuid or fileName), including issuer and counterparty details, amounts, currencies, execution dates etc.
- Search and filter transactions across files: use flexible filters (RSQL) on documented and searchable fields (such as status, endToEndId, transactionDate, counterparty.name, reference etc.) to retrieve only the transactions that match specific business criteria.
- Identify and analyze rejected or exceptional payments: list transactions with a given status (for example REJECTED) and/or specific reasonCode, optionally within a date range (e.g. by lastACKTime), to investigate issues reported by banks or internal controls.

Prerequisites

- Payment Advanced Routing (Fast Track) is activated in your database. Contact your Account Manager to confirm.
- The Kyriba user associated with your API credentials is a bulk payment file approver (Path in the Kyriba application: Payment ⇨ Payments/Direct Debits ⇨ Set-up ⇨ Approval workflow ⇨ Approval rule: File).

Change Logs

- **2.0.0 - Released on 2026-Feb-20**

Description

Exposes the transaction summary for routed bulk payment files, allowing clients to review and validate the payment details included in each file.

Bank transactions
Data — v1.1.1
Reviewed Data API, Version 1.1.1
Upload batches of transaction or setup data into Kyriba.
POST /v1/data and POST /v1/data/files; fileName query parameter; text payload or multipart file upload; response fields: fileId, fileName, hashSum.
Reviewed – Documentation only
Supports uploading 1–10 files through /v1/data/files. Documented errors: 400, 401, 403, 415 and 500. Transaction-specific file format and processing details not confirmed. No live API execution performed.
Payment status
Payment Files Status — v1.0.2
Reviewed Payment Files Status API, Version 1.0.2
Monitor the processing status of uploaded bulk payment files and retrieve bank acknowledgement information.
GET /v1/payment/payment-files; GET /v1/payment/payment-files/{uuid}/log; filters: fileName, uuid; pagination: page.limit, page.offset; response fields: creationDateTime, fileName, lastACK, nextAction, status, uuid, log.
Reviewed – Documentation only
Supports filtering, sorting and pagination. Bank and Kyriba acknowledgement details are available through lastACK. Errors documented: 400, 401, 403, 404 and 500. No live API execution performed.
ERP integration
To be reviewed
Review integration use cases, data models and any documented ERP connector or API patterns.
Understand how ERP and treasury systems exchange financial data.
Field mapping table and a simple source-to-target diagram.
Not yet reviewed
A proposed mapping is not a live integration.
Authentication & security
To be reviewed
Read portal documentation for supported authentication, scopes and environment setup.
Understand secure API access and permission boundaries.
Document authentication approach in words only; no secrets.
Not yet reviewed
Never publish access tokens, client secrets or personal credentials.
Testing & error handling
To be reviewed
Review sample requests, response codes, errors, limits and changelog notes.
Understand how an implementation team tests and monitors integrations.
Sanitised example request/response or screenshot with all secrets removed.
Not yet reviewed
Only test in an authorised sandbox if one is provided.
Bank statement balances
Bank Statement Balances — v1.3.0
Reviewed Bank Statement Balances API, Version 1.3.0
Retrieve closing account balances reported by banks.
Two GET endpoints; parameters: date, type, statementIdentifier/ref; response fields: account, bankBalance, amount, balanceDate, currencyCode, lastKnownBalanceDate.
Reviewed – Documentation only
Supports END_OF_DAY and INTRADAY balance types. Errors documented: 400, 403 and 404. No live API execution performed.
Transfer status and tracking
Transfers — v1.3.0
Retrieve transfer status and delete transfers
Track the processing status of transfers, identify transfers linked to a specific file, and delete transfers that have not yet been validated or batched.
GET transfer status; DELETE a given transfer; search by transaction number or reference; track transfers linked to a file; review batching and bank-response information.
Reviewed – Documentation only
API version 1.3.0, released 15-May-2025. Base URL: /v1/payment/transfers. Supports transfer-status tracking and deletion. Deletion applies to transactions not yet validated or batched. No live API execution performed.
Payment transaction validation
Payment Transaction Summary — v2.0.0
Retrieve transaction-level details from routed or translated bulk payment files
Review and validate individual payments, investigate rejected payments and identify payment exceptions.
Retrieve transactions using fileUuid or fileName; filter using RSQL; review fields such as status, endToEndId, ionDate, counterparty.name, reference, reasonCode and lastACKTime.
Reviewed – Documentation only
Released 20-Feb-2026. Base URL: /api/payments/payments-routing/payment-transaction-summary-details/v2. Requires Payment Advanced Routing (Fast Track) activation and a bulk payment file approver user. No live API execution performed.
